EDUCATION

Kalinga Institute of Industrial Technology (KIIT)

2023-2027

Bachelor of Technology — Computer Science and Engineering | CGPA: 9.39

TECHNICAL SKILLS

Programming Languages: Python, C++

Artificial Intelligence/Machine Learning: Deep Learning, Neural Networks, Reinforcement learning, NLP, Computer Vision, Transformers, Model Evaluation & Optimization

Generative AI & LLM Engineering: LLM Applications, Prompt Engineering, RAG Systems, Model Context Protocol (MCP), Claude Code, Multi-Agent Systems, LangChain, Embeddings, FAISS, ChromaDB, Pinecone, Hugging Face Transformers

Data Engineering & Quantitative Finance: ETL Pipeline, Pipeline Design, SQLAlchemy, Time-Series Data Processing

Backend & AI Systems Engineering: FastAPI, Flask, REST APIs, Microservices, Asynchronous Processing

Data & Databases: MySQL, PostgreSQL

MLOps & Deployment: Docker, Git, Model Serving, API Deployment, Linux

Core Computer Science: Data Structures & Algorithms, Operating Systems (OS), Database Management Systems (DBMS), Computer Networks, Object-Oriented Programming (OOP)

EXPERIENCE

Product Development Trainee – Deep RL & Applied AI in Finance | DAKSPHERE Private Limited

- Built Sthiti, a production-grade Python/PostgreSQL ETL pipeline ingesting NSE bhavcopies, XBRL fundamentals, derivatives, and news sentiment across **500+ equities** — processing **45,000+ feature** records across 30 trading sessions with zero data corruption via a **4-phase** fetch-collect-prepare-insert architecture.
- Trained a fine-tuned **FinBERT** sentiment classifier integrated with LLM-based news signal scoring and time-decay modeling, feeding regime-aware **Deep Reinforcement Learning** trading agents for algorithmic strategy evaluation

Software Engineering Intern – Automation & Applied AI | NeoPhyte Ambient Intelligence

- Engineered production-grade CRM automation pipelines handling data for **500+ active clients**, integrating REST APIs, webhooks, and databases to deliver reliable, scalable lead management.

AI & Backend Developer Intern | Programming With Maurya (PWM Group)

- Developed a production-grade **codebase analysis platform** supporting repositories with thousands of files while reducing redundant indexing through commit-aware updates.

PROJECTS

AI-Powered Traffic Violation Detection & Enforcement Platform | [GitHub](#)

- Designed and developed a **production-grade** traffic violation detection platform leveraging custom **YOLO11n** models, **ByteTrack**, **PaddleOCR**, and **FastAPI** to automate detection of helmet, seatbelt, triple-riding, red-light, illegal parking, and license plate violations.
- Engineered an **end-to-end** AI inference pipeline with **evidence packaging**, **OCR validation**, automated challan generation, analytics dashboards, and **asynchronous video processing**, enabling scalable and reliable intelligent traffic enforcement.

NexaFlow AI | [GitHub](#)

- Built and deployed a FastAPI-based **multi-agent orchestration platform** leveraging LLM-driven intent classification to route requests across microservices (weather, food delivery, PDF/email generation, calendar scheduling).
- Architected a **scalable, API-first system** with modular endpoints and environment-based configuration; integrated OpenAI/LangChain, OpenWeather, SendGrid, and Google Calendar to ensure **production readiness** and high extensibility.
- Integrated tool-calling workflows and modular agent skills, designing an extensible architecture compatible with Model Context Protocol (MCP)-style agent communication.

ACHIEVEMENTS & LEADERSHIP

- Secured **Top 2%** rank in KIITEE 2023 among **50,000+ applicants**, earning a Merit Scholarship for academic excellence.
- Led **GenAI & Machine Learning Domain** at Konnexions, designing a winter bootcamp roadmap and reviewing project implementations for production-oriented standards.
- Selected among top 20 teams out of 200+ to pitch at Hack-Nation Global AI Hackathon with MIT Sloan AI Club.
